

Conduikt

Multi-Agent AI Marketing Automation

Olayinka Fagbenro · Founder Lithuanian Startup Visa Application · July 2026

The marketing stack is broken for SMBs

SMB marketers and agencies spend **60–80%** of their time on repetitive content and campaign work.

The problem isn't AI quality. It's **fragmentation**.

- A writer in one tool, a scheduler in another, an audit in a third
- Performance data lives in a fourth, never feeds back into the first
- 10+ apps stitched with manual handoffs
- Output quality is inconsistent because data doesn't flow between them

The result: founders running their own marketing burn hours on context-switching instead of building product.

One platform. 18 agents. A closed loop.

Audit → Generate → Publish → Analyze → Improve

- 18 specialised agents today — SEO audit, content strategy, copywriting, social, email sequences, campaigns, A/B tests, programmatic SEO, growth playbooks, more
- Agents share research, brand voice, and performance data — no patchwork
- The feedback loop is **live in production**: posts that worked teach the model what to write next week
- Built for the founder who is also their own marketer — the buyer enterprise tools ignore

CAGR for AI marketing subset

32M+

SMBs in EU + US underserved by enterprise platforms

HubSpot, Marketo, and Adobe sell **up-market**. The floor is open — and the SMB / agency segment is the fastest-growing AI marketing buyer cohort.

Why now

01 AI quality crossed the threshold

Claude 4 / GPT-4-class models produce marketing output that's usable without heavy editing — first time true at this price point.

02 MCP standard is emerging

Agents can finally cross product boundaries cleanly — the missing piece for multi-agent platforms.

03 SMB margin pressure is permanent

"Do more with less" isn't a 2024 trend — it's the new operating reality. SMBs need leverage tools, not more SaaS.

04 Agency margins are compressing

Clients want output, not hourly invoices. Agencies need a productivity multiplier that doesn't hollow out the deliverable.

The window: 18–24 months before enterprise vendors react.

GROSS MARGIN AT SCALE

~75%

Traction

Launched public beta **April 2026**. Early stage — current focus is validating the loop with the first 20 customers before opening broader acquisition.

PRODUCT

- **18 production agents** shipped across audit, content, publishing, analytics
- **Closed feedback loop live in production** — analyzer surfaces what works, feeds it into the next generation (no other SMB tool does this today)
- **4 live customer testimonials** from SMB operators — Dara Sobayo, Adeola Owoade, Olatunbosun Olalekan, Oluwatobiloba Olajide (visible on conduikt.com)
- Dogfooded — Conduikt's own marketing runs through Conduikt

BUILD-IN-PUBLIC MOMENTUM

- **14-day launch playbook** currently running on X ([@olaDmenace](https://twitter.com/olaDmenace)) — Conduikt agents writing + scheduling every post
- Daily public commits to [olaDmenace/conduikt](https://github.com/olaDmenace/conduikt) — every fix, every learning visible
- **Free-access pilot** open to select agencies (white-label reports + bulk content) as the wedge to 100 paying customers
- Committed to publishing calibration data — the honest signal a Startup Visa committee can actually verify

Competitive landscape

COMPETITOR	WHAT THEY DO	WHERE THEY STOP
Jasper · Copy.ai · Writesonic	AI writing	Generate only — no audit, publish, or analytics loop
Surfer · SEMrush · Ahrefs	SEO tooling	SEO-only — no content generation, no publishing
HubSpot · Marketo · Adobe	Enterprise marketing	Heavy, expensive, slow — wrong shape for SMB / agency
n8n + Claude (DIY)	Generic automation	Requires building every workflow from scratch

Conduikt's wedge:

Multi-agent

SMB-first

Closed loop

Nobody else has all three. The closed-loop piece — performance data automatically feeding next week's generation — is genuinely novel today.

Go-to-market

PHASE 1 · NOW

Founder-led, build-in-public

- 14-day launch playbook on X + LinkedIn — Conduikt running its own marketing
- Direct DM outbound to solo SaaS founders (the ICP)
- Target: first 100 paying customers by month 6

PHASE 2 · MONTHS 6–12

Agency partnerships

- White-label reports + bulk content as the leverage angle
- One agency = 10–40 underlying SMB seats — force multiplier
- Target: 20 agency partners by month 12

PHASE 3 · YEAR 2+

Product-led growth

- Free tier → paid conversion via natural usage limits
- Organic SEO compounds the audience built in Phase 1
- EU enterprise tier once GDPR-native positioning is market-tested

Founder

Olayinka Fagbenro

Founder · Conduikt

Lagos, Nigeria → Vilnius, Lithuania

- **8+ years** senior frontend engineer
- Currently **leading frontend at BamBam Automation**
- Built Conduikt **solo** since February 2026 — every agent, the full stack, the brand
- Domain depth in **agentic AI workflows, MCP integration, marketing automation pipelines**
- Operator background — has run marketing-as-the-founder before, knows the pain firsthand
- Strong public-building track record on X ([@olaDmenace](#)) and [conduikt.com](#)

Why Lithuania

MB structure

Right entity for a bootstrapping founder — no minimum capital requirement, low admin overhead, clean EU operations.

Startup Lithuania

Government-backed Startup Visa programme for non-EU founders. Process pre-researched, application in flight.

GDPR-native

EU-incorporated SaaS is structurally easier to sell to EU enterprise than US-HQ'd competitors. A positioning moat.

Alumni network

Vinted, Nord Security (NordVPN), TransferGo — operators who've scaled Baltic SaaS internationally.

Geographic access

Vilnius direct to Berlin, Warsaw, Stockholm, Helsinki for repeated customer development.

Talent pool

Vilnius University + VGTU engineering pipeline. Strong AI/ML research base for year 2 hiring.

Financial projections

12 MONTHS

\$0 → \$200k ARR

- 200 paying customers
- ~\$83 blended ARPU (mix of Pro + Growth + Agency)
- 75% gross margin at scale

36 MONTHS

Path to \$1.5–2M ARR

- Contingent on hitting agency acquisition targets
- 1,000–1,500 paying customers
- Cash-flow positive month 28 in the base case

*Base case: **organic content marketing only**, no paid ads, no significant hires before month 10. Upside scenarios with funded paid acquisition land materially higher.*

Use of resources

Full-time founder focus

No consulting day-job split. 100% of working hours on Conduikt — the fastest single accelerant.

EU customer development

Direct, repeated, in-person meetings with EU SMB operators. Berlin / Helsinki / Stockholm reachable in a single workday.

First technical hire

Month 10. Lithuanian or wider EU candidate. Agent infrastructure or product engineering.

MB incorporation

Established within the first 120 days of arrival, per Lithuania's TRP + e-signature process. Clean cap table for the first institutional round.

GDPR-native sales

Unblocks EU enterprise deals US-incorporated competitors can't easily win.

Community access

Startup Lithuania, Rockit Vilnius, Vilnius Tech Park — the founder and customer ecosystem to compound the next 18 months.

The ask

Lithuanian Startup Visa to relocate to Vilnius full-time and build Conduikt from Lithuania.

12-month initial temporary residence permit, extendable up to 2 years.

Intent to establish an **MB within the first 120 days of arrival** and build long-term in Vilnius.
