

Conduikt

Multi-Agent AI Marketing Automation

Olayinka Fagbenro · Founder Estonian Startup Visa Application · June 2026

The marketing stack is broken for SMBs

SMB marketers and agencies spend **60–80%** of their time on repetitive content and campaign work.

The problem isn't AI quality. It's **fragmentation**.

- A writer in one tool, a scheduler in another, an audit in a third
- Performance data lives in a fourth, never feeds back into the first
- 10+ apps stitched with manual handoffs
- Output quality is inconsistent because data doesn't flow between them

The result: founders running their own marketing burn hours on context-switching instead of building product.

One platform. 18 agents. A closed loop.

Audit → Generate → Publish → Analyze → Improve

- 18 specialised agents today — SEO audit, content strategy, copywriting, social, email sequences, campaigns, A/B tests, programmatic SEO, growth playbooks, more
- Agents share research, brand voice, and performance data — no patchwork
- The feedback loop is **live in production**: posts that worked teach the model what to write next week
- Built for the founder who is also their own marketer — the buyer enterprise tools ignore

32M+

SMBs in EU + US underserved by enterprise platforms

HubSpot, Marketo, and Adobe sell **up-market**. The floor is open — and the SMB / agency segment is the fastest-growing AI marketing buyer cohort.

Why now

01 AI quality crossed the threshold

Claude 4 / GPT-4-class models produce marketing output that's usable without heavy editing — first time true at this price point.

02 MCP standard is emerging

Agents can finally cross product boundaries cleanly — the missing piece for multi-agent platforms.

03 SMB margin pressure is permanent

"Do more with less" isn't a 2024 trend — it's the new operating reality. SMBs need leverage tools, not more SaaS.

04 Agency margins are compressing

Clients want output, not hourly invoices. Agencies need a productivity multiplier that doesn't hollow out the deliverable.

The window: 18–24 months before enterprise vendors react.

GROSS MARGIN AT SCALE

~75%

Traction

Launched public beta **April 2026**. Building in public — every commit, every shipped feature, every honest "this didn't work yet."

PRODUCT

- **18 production agents** shipped — SEO, content, publishing, analytics
- **Real users on free + paid tiers**
- **Live customer testimonials** from SMB operators (Dara Sobayo, Adeola Owoade, Olatunbosun Olalekan, Oluwatobiloba Olajide)
- Dogfooded: Conduikt's own marketing runs through Conduikt

BUILD-IN-PUBLIC

- **14-day launch playbook** currently running on @olayinkafag — Conduikt agents writing and scheduling the posts
- **Closed feedback loop** live: analyzer extracts what works from real engagement data and feeds it back into the generator
- Daily commits to `olaDmenace/conduikt` — every fix, every learning visible

Real numbers replace placeholders before final export — beta signups, paying customer count, X follower delta, agency conversations in flight.

Competitive landscape

COMPETITOR	WHAT THEY DO	WHERE THEY STOP
Jasper · Copy.ai · Writesonic	AI writing	Generate only — no audit, publish, or analytics loop
Surfer · SEMrush · Ahrefs	SEO tooling	SEO-only — no content generation, no publishing
HubSpot · Marketo · Adobe	Enterprise marketing	Heavy, expensive, slow — wrong shape for SMB / agency
n8n + Claude (DIY)	Generic automation	Requires building every workflow from scratch

Conduikt's wedge:

Multi-agent

SMB-first

Closed loop

Nobody else has all three. The closed-loop piece — performance data automatically feeding next week's generation — is genuinely novel today.

Go-to-market

PHASE 1 · NOW

Founder-led, build-in-public

- 14-day launch playbook on X + LinkedIn — Conduikt running its own marketing
- Direct DM outbound to solo SaaS founders (the ICP)
- Target: first 100 paying customers by month 6

PHASE 2 · MONTHS 6–12

Agency partnerships

- White-label reports + bulk content as the leverage angle
- One agency = 10–40 underlying SMB seats — force multiplier
- Target: 20 agency partners by month 12

PHASE 3 · YEAR 2+

Product-led growth

- Free tier → paid conversion via natural usage limits
- Organic SEO compounds the audience built in Phase 1
- EU enterprise tier once GDPR-native positioning is market-tested

Founder

Olayinka Fagbenro

Founder · Conduikt

Lagos, Nigeria → Tallinn, Estonia

- **8+ years** senior frontend engineer
- Currently **leading frontend at BamBam Automation**
- Built Conduikt **solo** over 14 months — every agent, the full stack, the brand
- Domain depth in **agentic AI workflows, MCP integration, marketing automation pipelines**
- Operator background — has run marketing-as-the-founder before, knows the pain firsthand
- Strong public-building track record on X ([@olayinkafag](#)) and [conduikt.com](#)

Why Estonia

OÜ structure

Clean EU operations, founder-friendly tax, low admin overhead. Ready for institutional investment.

e-Residency

Application already in motion. Foundation for OÜ incorporation before relocation.

GDPR-native

EU-incorporated SaaS is structurally easier to sell to EU enterprise than US-HQ'd competitors. A positioning moat.

Alumni network

Bolt, Wise, Veriff. Operators who've built EU SaaS at scale. The right rooms to learn in.

Geographic access

Direct flights to Berlin, Helsinki, Stockholm for repeated customer development.

Talent pool

Estonia + wider EU hiring pipeline for the first technical hires in year 2.

Financial projections

12 MONTHS

\$0 → \$200k ARR

- 200 paying customers
- ~\$83 blended ARPU (mix of Pro + Growth + Agency)
- 75% gross margin at scale

36 MONTHS

\$0 → \$2M ARR

- 1,500 paying customers
- ~\$120 blended ARPU (Agency mix grows)
- Cash-flow positive month 28

*Conservative — assumes **organic content marketing only**, no paid ads, no significant hires before month 10. Upside scenarios with funded paid acquisition land materially higher.*

Use of resources

Full-time founder focus

No consulting day-job split. 100% of working hours on Conduikt — the fastest single accelerant.

EU customer development

Direct, repeated, in-person meetings with EU SMB operators. Berlin / Helsinki / Stockholm reachable in a single workday.

First technical hire

Month 10. Estonian or wider EU candidate. Agent infrastructure or product engineering.

OÜ incorporation

Clean cap table + tax structure ready for institutional funding. Estonia is the cleanest EU jurisdiction for a SaaS exit.

GDPR-native sales

Unblocks EU enterprise deals US-incorporated competitors can't easily win.

Community access

Garage48, Latitude59, Startup Estonia network — the founder and customer ecosystem to compound the next 18 months.

The ask

Estonian Startup Visa to relocate to Tallinn full-time and build Conduikt from Estonia.

12-month initial relocation. **€800/month subsistence** covered per visa rules.

Intent to incorporate **OÜ before arrival** and build long-term in Tallinn.
